

Econopolis EM Government Bonds Fund

Description of the fund

Econopolis EM Government bonds is a compartment of Econopolis Funds Sicav, a Luxembourg UCITS fund. The fund aims to deliver a long term return to investors via investments in government bonds in emerging markets. It is an actively managed fund that makes clear choices in which countries it invests and in which countries it does not invest.

Comments of the portfolio manager:

In October, emerging-market bonds failed to cash in on their good start to the month. The Econopolis EM Government Bonds compartment closed the month with a -0.87% return. Towards the end of October, several local currencies struggled because of the uncertainty surrounding the US presidential election in early November and rising US interest rates. A Trump victory could push interest rates higher and be pernicious for emerging countries that trade heavily with the United States, such as Mexico. Growing concerns about the fiscal situation in Brazil and Colombia did not help sentiment either. An exception in Latin America was Uruguay (+5% in October), where the rejection of a referendum on more government spending calmed markets. Eastern European currencies, such as those of Hungary and Poland, also struggled. On the other hand, Serbia, one of the largest positions in the hard currency segment of the compartment, received its well-deserved upgrade to 'investment grade' from S&P. Serbia's debt ratio has fallen from around 70% in 2015 to around 48% today. One of the main reasons for buying Serbian bonds several years ago was our expectation that Serbia would eventually return to this investment grade. In October, we took profits on a euro bond from the Hungarian Magyar development bank. This has only been running for one year but has performed tremendously well since its purchase about two years ago. Consequently, the credit spread had become very low. In return, we increased the weight of bonds in local currencies by buying the currencies of India and Indonesia.

Risk Indicator

The risk indicator assumes you keep the product for 5 years. The actual risk may vary significantly if you redeem the product early and you may get back less. The summarised risk indicator is a guide to the risk level of this product compared to other products. It shows how likely the product is to lose money due to movements in the markets or because we are unable to pay you out. We have classified this product as 3 out of 7, which is a medium-low risk class. This classifies potential losses due to future performance at a medium-low level and poor market conditions are unlikely to affect our ability to pay you out. Be aware of currency risk. You may receive payments in a currency that differs from your reference currency, so the final return you receive depends on the exchange rate between the two currencies. This risk is not taken into account in the indicator above. The sub-fund is also exposed to the following materially relevant risks not included in the summary risk indicator: Other risk factors may exist. This product does not protect against future market performance. so you may lose all or part of your investment. If we are unable to pay you what you owe, you may lose your entire investment.

Investment objectives:

The sub-fund's objective is to provide long-term capital gains to its shareholders. This objective will be pursued by investing the sub-fund's assets in fixed income instruments, cash or cash equivalents and without geographical limitation. At least 51% of the sub-fund's assets will be invested in emerging economies with no sector or currency restrictions. The sub-fund aims to generate returns from current income and capital appreciation by investing in fixed income securities actively selected by the Investment Manager. The selection will mainly (i.e. at least 90% of the bond portfolio) relate to instruments issued by governments, government agencies, supranational institutions and/or government-guaranteed issues. The sub-fund may invest to a limited extent (i.e. no more than 10% of the bond portfolio) in fixed income instruments issued by corporate entities or other private sector entities that do not benefit from an explicit government guarantee. The sub-fund may invest in fixed-income securities issued in local currencies of emerging countries or in fixed-income securities issued in currencies of non-emerging countries, without any limitation. The sub-fund's neutral investment universe is a combination of 30% hard currency EM bonds and 70% local currency EM bonds. 70% EM bonds in local currency. The maximum weight per issuing country is limited to 15% of the sub-fund's net assets.

The sub-fund is actively managed and will invest in securities on the basis of macroeconomic analysis, analysis of specific issuers, political analysis, valuations and/or other considerations deemed appropriate by the investment manager. At least half of the bond portfolio will be invested in investment grade credits at the time of purchase of the relevant fixed income instruments. The rating will be determined based on the highest rating from one of the three major rating agencies. If the bonds are not rated, the issuer's own rating will be used, if available. Additionally, the sub-fund may hold cash sight deposits of up to 20% of its assets. Subject to legal restrictions, the sub-fund may invest in derivative financial products, such as futures, options, forward foreign exchange contracts, credit default swaps or interest rate swaps, with a view to achieving its investment objectives and hedging risk. The sub-fund promotes environmental or social characteristics. This sub-fund is subject to a sustainable investment policy, which can be accessed at <https://www.econopolis.be/en/sustainability>. Additional information on sustainability is available in the fund's prospectus. Benchmark: The portfolio is actively managed on a discretionary basis without reference to a benchmark.
